Harry's employment, other experience and portfolio plan

Built from the 514-job study (3 November 2026), the 40-editor ranking study and your optimization rules. All text is honest: it describes your skills and process, and never claims clients, numbers or reviews you don't have.

Short answer

Section	What you have	What to have	Why
Employment	5 entries	**Keep 5. Add a new one only for each new real client**	Top-ranked editors have 1–5. Profiles with ~100 padded entries ranked worst
Other experience	3 entries	**20** (the 3 you have + 17 below)	Each one adds search words clients use, without claiming fake clients
Portfolio	1 video	**10 videos** (list below)	55% of jobs require sample links. New editors with orders have about 14

1. Employment: why not 20

- **The data:**
  - Edmond O. ($100K+) has **1** entry, and Isaac T., #1 in Nigeria searches, also has **1**.
  - Hafsa H. appears in all 7 searches with **2**.
  - The three profiles with **100** entries (Kazeem M., Nawwal I., Ejiofor J.) ranked worst on average (#11–21) and had earned only $3–4K each.
- **The risk:** 15 more employers would have to be invented. Clients can check, and Upwork can flag fake work history. One flag costs more than any ranking gain.
- **Keep:** your 5 entries, as long as each one is true and has real dates. Freelance, Alpha Media Creators, Ezi Fit Apparel Brand, Fitness Coach and City Church London Media Team.
- **Add later:** each real long-term client from Upwork or offline, using the "Title | Platform | Niche" title style.

2. Other experience: 20 entries

Paste each one into **Profile → Other experiences → Add**: the bold line goes in "Subject", the paragraph in "Description". Entries 1–3 are the ones I gave you before. Add them first if they aren't on your profile yet.

1. Podcast & Long-Form to Short-Form Repurposing I turn long podcasts, interviews, webinars and YouTube videos into short clips for Reels, TikTok and YouTube Shorts. I watch the full

recording and pick the moments that work on their own: a strong opinion, a story, a useful tip or a funny reaction. Each clip gets a hook in the first 3 seconds, clean cuts that remove pauses and filler words, animated captions and a clear ending. One episode usually gives 8–20 clips, delivered in 9:16 with titles and caption ideas.

2. Hooks, Captions & Retention Editing for Reels, TikTok and Shorts Short-form video is won or lost in the first 3 seconds. I edit for retention: I open with the strongest line or visual, cut every dead second, add pattern interrupts (zooms, B-roll, sound effects, text pops) every few seconds, and use word-by-word animated captions that work with the sound off. I follow each platform's safe zones and check every video on a phone before delivery.

3. AI-Assisted Video Workflow (Opus Clip, ElevenLabs, Higgsfield, Kling, Veo) I use AI tools to work faster and add value, not to replace editing. Opus Clip helps me scan long videos for possible moments, which I then review and cut by hand. ElevenLabs creates clean voiceovers. Higgsfield, Kling and Veo generate AI B-roll and product scenes when there is not enough real footage. Every final video is edited in Premiere Pro or CapCut and checked by me.

4. Weekly Short-Form Clip Pipeline Management I manage the full short-form pipeline for creators and businesses, from raw recording to ready-to-post files. I own the weekly delivery schedule, so clients never miss a posting day. I coordinate through one shared Google Drive or Dropbox folder: clients drop new recordings, and I return finished clips in labelled batches. I keep a simple clip log (Google Sheets) of what was delivered, posted and planned next, so nothing gets lost and the client approves in minutes.

5. Talking-Head Video Editing for Coaches, Consultants & Founders I edit talking-head videos, where one person speaks to camera, into tight, engaging Reels, TikToks and Shorts. I cut pauses, mistakes and filler words, add punch-in zooms on key points, bold captions with highlighted keywords, B-roll that shows what is being said, and light sound design. The goal is a video that feels fast and confident even when the raw footage was one long, unedited take.

6. Finding the Best Moments: Clip Selection from Long Videos Many clients have hours of content and no time to rewatch it. I take that job: I review full episodes or recordings, note every strong moment with a timestamp, and rank them by how well they work alone as a short clip. I send the client a short list of the best moments with suggested hooks, so they can approve, skip or add ideas before I edit.

7. Brand Templates & Consistent Editing Style I build a reusable template for each client: caption style, fonts, colours, logo, intro or outro cards, lower thirds and progress bars. I save it as Premiere Pro Essential Graphics or MOGRT templates (or CapCut templates), so every clip looks like the same brand. When a client sends reference videos, I match the pacing, text style and music feel, then keep it the same week after week.

8. Multi-Camera Podcast Editing (Riverside, Zoom, Descript) I edit multi-camera and remote podcast recordings from Riverside, Zoom and similar tools. I sync the speakers, switch to the person talking, clean up cross-talk and long pauses, and use Descript for fast text-based rough cuts when a client wants full episodes. From the same recording I then cut vertical clips with the speaker's face kept centred in 9:16.

9. YouTube Shorts Repurposing from Long-Form YouTube Videos I turn horizontal YouTube videos into vertical YouTube Shorts. I reframe 16:9 footage to 9:16 so the speaker or action stays centred, pick the strongest 30–60 seconds, add a title bar, captions and a loop-friendly ending that encourages replays. This lets YouTubers grow with Shorts from content they have already published.

10. UGC & Direct-Response Video Ad Editing (Meta, TikTok) I edit UGC-style and product footage into 15–30 second ads for Facebook, Instagram and TikTok. Each ad opens with a scroll-stopping hook, uses on-screen text that works with the sound off, product close-ups, B-roll and a clear call to action. I deliver several hook versions per ad (question, bold claim, problem/solution), so brands can test which one performs best.

11. AI B-roll, Product Scenes & AI Video Ads When a brand has little or no footage, I create it. I generate product shots, lifestyle scenes and B-roll with Higgsfield, Kling and Veo, add an ElevenLabs voiceover, then edit everything in Premiere Pro or CapCut with captions, pacing and music. The result is a finished ad or social video that doesn't look like generic AI content.

12. Audio Cleanup, Voiceover & Loudness for Social Video Bad audio makes viewers scroll away. I clean up noisy podcast and phone recordings: noise reduction, de-essing, levelling between speakers and removing echo where possible. I normalise voice to around -14 LUFS for social platforms and mix background music low (around -25 dB) so speech stays clear. When a script needs a voice, I produce AI voiceovers with ElevenLabs.

13. Sound Design & Music for Short-Form Retention I use sound to keep people watching: whooshes on cuts, pops on text, risers before key points and music that matches the energy of the clip. I pick licensed or royalty-free tracks the client can safely post, and I time cuts to the beat when the style calls for it. Good sound design makes a simple talking-head video feel professional.

14. Colour Correction & Grading for Phone and Webcam Footage (DaVinci Resolve) Most creator footage is shot on phones or webcams with uneven light. I correct exposure, white balance and skin tones, match colour between cameras and scenes, and apply a consistent look that fits the client's brand. I use DaVinci Resolve for grading and Premiere Pro Lumetri for quick fixes, so every clip in a series looks the same.

15. Motion Graphics & Animated Text (After Effects) I create motion graphics that make short-form content clearer and more engaging: animated titles, keyword highlights, emoji and icon pops, simple charts, call-out arrows, lower thirds and progress bars. I build them in After Effects, or as reusable MOGRT templates in Premiere Pro, so they can be applied quickly across every clip in a client's series.

16. Multi-Format Exports & Platform Safe Zones (9:16, 1:1, 4:5, 16:9) I deliver each video in the sizes a client needs: 9:16 for Reels, TikTok and Shorts, 1:1 and 4:5 for feed posts and ads, and 16:9 for YouTube. I keep captions, faces and calls to action inside each platform's safe zones, so nothing is hidden by buttons or descriptions, and I export with the right settings for quality and file size.

17. Faceless Short-Form Videos (Script, AI Voiceover & B-roll) I create faceless short-form videos for channels that don't want to film: a short script or fact list, an ElevenLabs voiceover, and stock or AI-generated B-roll with captions and music. Each video opens with a strong question or claim and changes visuals every few seconds to hold attention. Ideal for faceless YouTube Shorts, TikTok and Instagram pages that need consistent posting.

18. Fast-Turnaround Batch Editing (24–48 Hours) Clients who post daily need edits fast and reliably. I work in batches: once the style and template are approved, I deliver the first clip within 24–48 hours and full weekly batches on a fixed day. I keep organised project files and can share editable Premiere Pro, CapCut, DaVinci Resolve or Final Cut Pro projects on request, so the client always owns their work.

19. Clip Titles, Captions & Posting Support Along with each clip, I write a short on-screen title and a posting caption idea with relevant hashtags, so the client can post in seconds. When a client wants it, I can also upload or schedule clips to their channels using the access they give me, or organise finished files by platform and date in their shared folder.

20. Revisions, Feedback & Client Communication I make feedback easy: clients can comment with timestamps, and I apply clear, specific revisions (up to 2 rounds per clip in my standard plans). I keep communication on Upwork, reply quickly from Lagos (GMT+1, overlapping UK/EU hours and US mornings) and confirm deadlines in writing, so clients always know when their next batch will arrive.

3. Portfolio: 10 videos

The rules every item follows:

- **Format:** vertical 9:16, 15–60 seconds.
- **Title:** "Format | Platform | Result" style.
- **Cover:** big text, e.g. "BEFORE / AFTER" or "PODCAST CLIP".
- **Description:** must end with a **"Tools:"** line, and with **"Sample edit."** if it wasn't paid work.
- **Order on your profile:** #1, #3, #4 first.
- **Footage:** your own recordings, Pexels, Pixabay or Mixkit, Creative Commons videos (credit the creator), or real people who give permission.

#	Portfolio video	Matches this client problem (share of 391 editing jobs)
1	Podcast clip with hook + captions ✅ (you have this)	Long videos not turned into clips (25%) · Low views (24%)
2	1 podcast episode → 5 clips content pack	Need consistent volume (40%)
3	Talking-head reel for a coach or founder	Talking-head is 9% of jobs, and 61% of those want long-term work
4	Before / After: raw footage to finished reel	Low views (24%): shows what you add
5	Multi-camera podcast clip (2 speakers, speaker switching)	Podcast clips 11% · Riverside and Zoom recordings

#	Portfolio video	Matches this client problem (share of 391 editing jobs)
6	Brand template series: 3 clips in one consistent style	Need brand style kept (27%)
7	Long YouTube video → YouTube Shorts	Long videos not turned into clips (25%)
8	UGC product ad with 3 hook variations	Ads not converting (15%)
9	AI video ad (Higgsfield/Kling + ElevenLabs + Premiere Pro)	No footage (14%) · AI tools named in 18% of jobs
10	Faceless short with AI voiceover + B-roll	Faceless YouTube (9%)

Titles and descriptions to paste:

1. Podcast to Viral Reel: Hook, Jump Cuts & Animated Captions *(already up: update the description)* Turned a 42-minute two-person finance podcast into a 17-second vertical reel. Opened on the punchiest line as a 3-second hook, cut every pause and filler word, reframed 16:9 to 9:16 with the speaker centred, added punch-in zooms and word-by-word animated captions, and mixed music and sound effects with the voice at -14 LUFS. Tools: Premiere Pro, After Effects. Sample edit, made from a Creative Commons podcast.

2. Podcast Repurposing | 1 Episode to 5 Shorts, Reels & TikToks One podcast episode turned into 5 ready-to-post clips with the same caption style, brand colours and hook structure across the set. This is how I help podcasters post every day without recording more: one episode becomes a week of content. Tools: Premiere Pro, Descript, Opus Clip (first pass, then hand-picked). Sample edit.

3. Talking-Head Reel | Coach Content | Instagram Reels & TikTok A coach's single-take talking-head video turned into a fast, confident Reel: dead air cut, punch-in zooms on key points, bold captions with highlighted keywords, B-roll that shows what is said, and subtle sound effects, all inside the safe zones. Tools: Premiere Pro, After Effects. Sample edit.

4. Before / After | Raw Footage to Scroll-Stopping Reel Raw phone footage before and after my edit: a 3-second hook, tighter pacing, animated captions, colour correction, B-roll, sound design and music, all in 9:16. It shows exactly what I add to a client's content. Tools: CapCut, DaVinci Resolve (colour). Sample edit.

5. Multi-Camera Podcast Clip | 2 Speakers | YouTube Shorts & Reels A two-person podcast recorded on separate cameras, synced and cut to always show who is speaking, then reframed to 9:16 with each face centred. Includes captions in two colours (one per speaker), a hook and a clean ending. Tools: Premiere Pro (multicam), Descript. Sample edit.

6. Brand Template Series | 3 Clips, One Consistent Style Three clips edited with one reusable brand template: the same fonts, colours, caption style, logo bug and outro card, so a client's page looks consistent every week. The template is saved for fast reuse on every future clip. Tools: Premiere Pro (Essential Graphics/MOGRT), After Effects. Sample edit.

7. YouTube Shorts Edit | Long-Form to Short-Form Repurposing A horizontal YouTube video repurposed into a vertical Short: reframed to keep the speaker centred, the best 45 seconds

selected, a title bar, captions and a loop-friendly ending to boost replays. Tools: Premiere Pro, DaVinci Resolve. Sample edit.

8. UGC Video Ad | TikTok & Meta | 3 Hook Variations for Testing A UGC-style product ad delivered in 3 versions with different opening hooks (question, bold claim, problem/solution), so the brand can test which performs best. Includes sound-off captions, product close-ups and a clear call to action, in 9:16 and 4:5. Tools: CapCut, Premiere Pro. Sample edit.

9. AI Video Ad | Higgsfield + ElevenLabs + Premiere Pro | Product Brand A 30-second product ad built from AI-generated scenes (Higgsfield, Kling), an ElevenLabs voiceover and hand-edited pacing, captions and music in Premiere Pro, made for brands without footage that still want it to look natural. Tools: Higgsfield, Kling, ElevenLabs, Premiere Pro. Sample edit.

10. Faceless Short | AI Voiceover + B-roll | YouTube Shorts & TikTok A faceless storytelling Short: a short script, an ElevenLabs voiceover, stock and AI B-roll, captions and music, opening with a strong question and changing visuals every few seconds. Built for faceless channels that need consistent posts without filming. Tools: ElevenLabs, Veo, CapCut. Sample edit.

4. Order to do it in

1. **This week:** add other experiences 1–10, and portfolio items #2, #3 and #4.
2. **Next week:** add other experiences 11–20, and portfolio items #5–#7.
3. **Week 3:** portfolio items #8–#10.
4. **Every new real client:** add an employment entry, and replace "Sample edit" items with real work.
5. **Keep sending proposals the whole time.** Your first paid job matters more for ranking than any of these sections.
